

## Traffic Count for Transport Assessment

To establish a baseline for the Transport Assessment, we undertook a number of traffic counts across Ripon's highway network between 1 and 8 June 2019 (including during school term times).

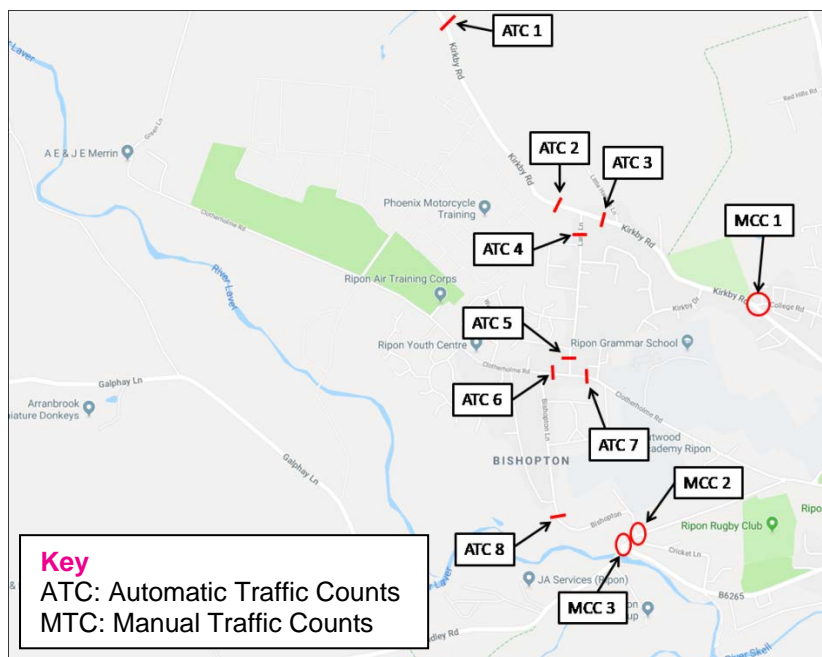

The maps below show the location of these counts.

These counts were supplemented by timed journey runs across the city; queue length surveys; observations of Clothierholme, Kirkby and College Roads; and junction modelling of key junctions.

We have also considered the existing traffic generation from the barracks site and other committed developments in the local area.

A future baseline year of 2035 has been used, which aligns with the Harrogate Local Plan's traffic model and the timeline for full build-out of the site.

The information in this document relates to Board 7 – Transport and Connectivity of the Information Events exhibition boards for 2 and 5 October 2019.

**Key**  
 ATC: Automatic Traffic Counts  
 MCC: Manual Traffic Counts
